EDUCATION

B.S. Information Technology

August 2022 – May 2026

Arizona State University

Tempe, Arizona

- GPA: 4.0, Dean's List: 7 semesters
- Coursework: Object-Oriented Programming, Database Management Systems, Web development, Agile Project Management, AWS Data Engineering, Applications in AI, Big Data Tools, Advanced Deep Learning Structures

TECHNICAL SKILLS

Programming Languages: Python, R, SQL, Java, JavaScript, HTML, CSS, Bash, Go

Libraries and Frameworks: Django, Flask, RESTful APIs, React, Scikit-Learn, PyTorch, NumPy, Pandas

Tools: Linux, Git, GitHub, Docker, Kubernetes, Alteryx, AWS, Claude Code

EXPERIENCE

Data Analyst Intern

June 2025 – July 2025

Food Forest AI

Philadelphia, PA

- Automated and standardized data cleaning for company records using **Python** and **regex**, reducing manual processing time by **80%** and improving data accuracy for downstream enrichment.
- Validated and audited datasets using **SQL** by detecting duplicates, null values, and schema inconsistencies, ensuring data readiness and improving ingestion reliability by **40%**.
- Engineered and maintained **web scraping** pipelines to populate missing company fields (websites, bios, social links), increasing dataset completeness by **60%** and enabling stronger data profiling.

Executive Engineering Tutor

September 2024 – May 2026

Arizona State University

Tempe, AZ

- Coached and instructed **20–30** students weekly through in-person and virtual tutoring in **Python**, **SQL**, **DBMS**, and **Linux**, strengthening technical fundamentals and problem-solving skills.
- Facilitated and coordinated **communication** between faculty and a team of 10+ Learning Assistants, improving instructional alignment and student support across technical coursework.

PROJECTS

SmartLedger (Django, Python, HTML, CSS, MySQL, Git, AWS)

- Engineered a full-stack smart bookkeeping system that enables users to track transactions, categorize spending, import financial data via CSV, and visualize financial insights through interactive dashboards.
- Designed a scalable 3-tier architecture using **Django templates** and **bootstrap** (presentation layer), **Django** (application layer), **MySQL** on **AWS RDS** (data layer), and deployed it using **AWS EC2 + VPC**.
- Integrated an AI expense-categorization feature using structured **prompt engineering** with an **OpenAI API call**, automatically classifying transactions and reducing manual labeling time by about **65%**.

AI Document Assistant (RAG, FastAPI, Inngest, Qdrant, React, Docker)

- Developed a **RAG** application that allows users to upload PDFs and ask natural-language questions, retrieving context-aware AI responses from embedded document content with source attribution.
- Built an asynchronous Python microservice stack using **FastAPI**, **Inngest** orchestration, **Qdrant** vector database, **LlamaIndex** ingestion pipelines, OpenAI models, and a **React** frontend with logging, retries, and rate limiting.
- Enabled **semantic search** over document chunks, reducing manual lookup time by **~80%**, improving reliability via automated monitoring and fault-tolerant execution, and achieving **~92%** retrieval accuracy.

Task Flow (Java, Spring Boot, MySQL, Docker, Multithreading)

- Built a scalable **asynchronous** job processing system with **REST APIs**, **DB-backed queue**, and **multi-threaded worker** architecture enabling concurrent, **fault-tolerant** task execution.
- Implemented using **Java**, **Spring Boot**, **MySQL**, **Docker**, and ExecutorService-based **concurrency** with structured logging.
- Improved system reliability with **at-least-once delivery**, **retries**, **DLQ**, and **scheduling**, ensuring zero job loss and enabling resilient background processing under failures and high load.

CERTIFICATIONS

- *Back-End Developer Professional Certificate – Meta (Issued: November, 2025)*
- *Machine Learning Specialization – DeepLearning.AI & Stanford Online (Issued: August, 2025)*
