EDUCATION

B.S. Information Technology

Arizona State University

Expected May 2026

Tempe, Arizona

- GPA: 3.99, Dean's List: 6 consecutive semesters
- Coursework: Object-Oriented Programming, Database Management Systems, Web development, Agile Project Management, AWS Data Engineering, Applications in AI, Big Data Tools, Calculus, Applied Statistics

TECHNICAL SKILLS

Programming Languages: Python, R, SQL, Java, JavaScript, HTML, CSS, Bash, Go

Big Data & Analytics: AWS (S3, Lambda, Athena, Redshift, Glue, EMR), Apache Spark, Airflow, Kafka, Snowflake, Tableau

Libraries and Frameworks: Django, Flask, RESTful APIs, React, Scikit-Learn, TensorFlow, NumPy, Pandas

Tools: Linux, Git, GitHub, Docker, Kubernetes, Microsoft Office, MySQL Workbench

EXPERIENCE

Data Analyst Intern

Food Forest AI

June 2025 – July 2025

Philadelphia, PA

- Automated data cleaning of 500+ company records using Python and regex, reducing manual processing time by 80% and improving data accuracy for downstream enrichment.
- Utilized SQL to query and validate cleaned datasets by identifying duplicates, null values, and structural inconsistencies, ensuring data readiness for further processing and improving ingestion reliability by 40%.
- Developed and maintained web scraping scripts to populate missing company fields, increasing dataset completeness by 60% and enabling more robust data profiling.

Executive Engineering Tutor

Arizona State University

September 2024 - Present

Tempe, AZ

- Delivered in-person and virtual tutoring in Python, Java, SQL, DBMS, and Linux to 20–30 students weekly, fostering technical skill development aligned with modern engineering practices.
- Coordinated between faculty and a team of 10+ Learning Assistants, enhancing communication and support systems critical for collaborative problem-solving in technical environments.

PROJECTS

Stock Trading System (Flask, MySQL, Git, AWS)

- Designed and developed a full-stack stock trading simulator to train brokers on portfolio management and order execution, implementing real-time stock price generation, secure user authentication, and role-based admin controls.
- Architected a 3-tier client/server application with Flask (business logic), MySQL (RDS data tier), and deployed it on AWS (EC2 + VPC), ensuring scalability and isolation of services.

Plant Disease Classification (CNN, TensorFlow, OpenCV, Streamlit, Azure)

- Designed and implemented a CNN-based model to classify plant leaf images, achieving 87% test accuracy on the Plant dataset.
- Optimized preprocessing and batch loading, reducing training time by 30% compared to the baseline pipeline.
- Currently working to deploy the trained model on Azure Machine Learning as a real-time inference endpoint with REST API integration.

Multi-Document Q&A System (LLM, Llama 3.3, Groq API, Chroma DB)

- Developed an AI-driven search and Q&A system for multiple documents, improving query response time by 40% through vectorized search and caching.
- Achieved ~90% accuracy in benchmark tests after iterative prompt engineering and retrieval optimization.
- Streamlined document ingestion with automated parsing, saving an estimated 2–3 minutes per file compared to manual lookup.

CERTIFICATIONS

- Back-End Developer Professional Certificate – Meta (Issued: November, 2025)
- Machine Learning Specialization – DeepLearning.AI & Stanford Online (Issued: August, 2025)
